Reassuring IT

ThreatLocker

Empowering HOLKER's Managed Services

THREATLOCKER®

ThreatLocker is a robust cybersecurity solution designed to protect organisations from data breaches and unauthorised access.

As an MSP, integrating ThreatLocker into our services significantly enhances our clients' security posture. HOLKER proudly introduces Managed ThreatLocker as part of our Managed Service offering, featuring key components.

Key Features of ThreatLocker

1. ThreatLocker Protect:

- Application Control: Enforces application allowlisting and blocklisting.

- Ringfencing: Isolates applications to prevent lateral movement during attacks.

- Storage Control: Extends control to storage devices based on policies.

2. ThreatLocker Detect:

- Behaviour Monitoring: Continuously monitors endpoint behaviour.

- Real-time Alerts: Receives alerts for suspicious activities.

- Integration with ThreatLocker Protect: Comprehensive security coverage.

3. Elevation Control:

- Manages privilege escalation to limit unauthorised changes.

4. ThreatLocker Storage Control:

- Manages data security by restricting unauthorised storage access.

Why Proactive Security Matters

The threat landscape evolves constantly, with cyberattacks growing more sophisticated. Data breaches are costly both financially and in terms of reputation. Proactive security measures are essential to mitigate these risks.

A robust cybersecurity solution designed to protect organisations from data breaches and unauthorised access.

In conclusion, with ThreatLocker, HOLKER strengthens security and ensures peace of mind for our clients. Let's unlock a safer digital future together!
